Mezzanine Floor System

With your business volumes growing and seemingly shrinking workplace, Godrej Mezzanine floor offers a creative solution to provide more space for men & material.

Ideal for

- (a) Warehouses, other industrial and commercial establishments where the useful area of the premises can be multiplied for use as office space, storage or work area, supervision area etc.
- (b) Creating earmarked storage areas with either similar or dissimilar storage systems above and below the Mezzanine, for storage of items that needs to be segregated as fast moving/slow moving, finished goods/packing materials, palletized/non-palletized etc.

General Description

Godrej Mezzanine floor system is a light weight steel flooring system provided at a suitable height from ground. Vertical columns which are grouted support the grid created by the horizontal beams on which decking panels are assembled.

The system could be configured to suit the layout of the room, taking into account pillar positions, door positions etc. The solution can also be designed for varying load capacities ranging from 500 kg/sqm to 1500 kg/sqm.

The system consists of optimum modules of 3m x 4m and the end module dimensions could be suited to match the total area on which the Mezzanine floor is required to be provided. Alternatively, the module size could be uniformly spaced across the entire Mezzanine area to enable maximum area utilization under the Mezzanine floor. The Mezzanine system could be provided in standard heights ranging from 2.4m to 3m and beyond 3m height, it has to be designed taking care of the additional stability requirements. Both single tier and

two-tier systems can be provided depending on the height available which could almost double or triple your floor space.

Godrej Quality

Godrej Mezzanine floor system is of cold formed steel construction, designed conforming to SEMA guidelines.

Superior quality CRCA/HR steels, conforming to relevant IS standards is used in the manufacture of this system. For a longer life, all steel components are given a thorough 5 zone 8 stage special pre-treatment. Subsequently, they are powder coated with epoxy polyester powder for scratch resistant, uniform and lasting finish which remains attractive through years of use.

Benefits

Better use of cubical space - Godrej floor helps you effectively utilize the height of the building, to meet your needs of increased space.

Flexibility - Being a bolted structure, the system offers excellent interchangeability in terms of relocating it in future. Also it saves the hassle of obtaining legal permission from various Municipal Authorities unlike civil structure.

Upgradeability - The modular construction enables easy expansion in future, by just adding on additional beams and columns, without the need for any welding at site.

Aesthetics - All the components are powder coated which make the system aesthetically appealing. Also pre-fabricated staircase and tubular railing suits the decor of the work/office area.
